

EasyBooking - Comparación entre los dos diagramas

- **Diagrama E-R:**

- **Diagrama generado por datanucleus:**

- **Comparación:**

Como podemos observar en estos dos diagramas, las relaciones son las mismas. Comparando los 2 diagramas, vemos como hay diferencias en los atributos. Estas diferencias vienen dadas porque cuando hicimos el diagrama de entidad-relación no metimos en cada clase todos los atributos que teníamos en el diagrama de clase. Por ello, al pasar el diagrama de clases a código (eclipse) y este genera el diagrama con dataNucleus, cada tabla tiene más atributos de los que pusimos en el diagrama entidad-relación.
